EXPERIENCE

Sunder - AI Workflow Studio 2025 - Present

Founder / AI Builder | San Francisco / Singapore

- Built four AI deployment projects in the builder era: GTM Workspace, Sunder Legal, Neo Bot, and Zhao OrderOps.
- Turned messy operator workflows into structured data, review queues, source-backed outputs, audit trails, and operational handoffs across GTM, legal claims, sales ops, and food distribution.
- Wrote discovery notes, PRDs, proposals, schemas, edge-case trackers, acceptance criteria, and verification artifacts from real customer/operator workflows.
- Kept human judgment inside the system through low-confidence flags, exception routing, reviewer handoffs, approval gates, and audit trails.

Sample Healthcare / San Francisco AI Builder Era 2025

Forward Deployed Strategist, Healthcare AI Workflows | San Francisco

- Mapped patient-intake and prior-authorization evidence-extraction workflows with healthcare operators, translating messy clinical documents, payer criteria, missing evidence, review queues, and human decisions into system requirements.
- Used an internal low-code, drag-and-drop workflow builder to design node-based process flows, conditional branching, evidence fields, missing-input detection, exception routing, reviewer handoffs, and auditability.
- Built the forward-deployed deployment muscle: stay close to operators, find the real bottleneck, prototype the working wedge, and decide which workflow primitives should generalize into product.

Salescraft - GTM Automation Agency May 2024 - Present

Founder | Singapore

- Built AI-enabled GTM systems for 8 tech startups using Clay, Make/n8n, GPT, agents, and APIs; generated USD 1M+ client pipeline and roughly USD 200K revenue in 8 months.
- Designed workflows for TAM scraping, account enrichment, fit scoring, personalized outbound, CRM hygiene, and seller handoffs for founder-led and early GTM teams.
- Used Cursor-assisted JavaScript, TypeScript, React, Python, and API debugging to inspect automation logic and collaborate credibly with technical teams.

Airwallex - Series F Startup Apr 2023 - Apr 2024

Account Executive / GTM Lead | Singapore

- Second outbound hire for Singapore market expansion; competed against 20+ incumbent fintech providers.
- Achieved 200%+ quota attainment and closed 22 new logos with average annual deal sizes of USD 40K-60K.
- Scoped a beta payment gateway proof of concept with the technical team, creating first revenue and validating an early enterprise workflow.

Boxo - Seed to Series A Startup Jan 2021 - Apr 2023

Head of Business Development / Founding GTM Operator | Singapore / APAC

- Second founding member after seed; helped navigate 5 pivots across ecommerce, marketplace-as-a-service, miniapps, and related models.
- Grew enterprise sales from USD 0 to USD 450K ARR across 3 fintech clients; led RFPs, C-suite relationships, legal/commercial negotiation, and technical scoping with the CTO.
- Closed 9 super-app partnerships with 500M+ aggregate user reach, translating miniapp infrastructure into buyer-specific commercial and product narratives.

EDUCATION

BA Law, First Class Honours - University of Cambridge, Wolfson College 2016 - 2019

Top 10%. Machine-learning sentencing dissertation awarded First Class (75%). Jennings Prize. Cambridge Commonwealth, European and International Trust Scholarship.

Full Stack Open - University of Helsinki Completed

Modern JavaScript web development: React single-page apps, REST APIs with Node.js, testing, TypeScript, and modern web application patterns.

SKILLS

AI workflows: Clay, Make, n8n, GPT, agents, APIs, prompt/workflow design, source-backed outputs, human review gates. **Product/build:** JavaScript, TypeScript, React, Python, Supabase, Cursor-assisted code review and debugging. **Commercial:** enterprise sales, APAC GTM, stakeholder mapping, RFPs, C-suite negotiation, partnerships, team management.
